

Soil & Leaf Analysis

Soil and leaf tests are important tools for growers to properly assess nutrient availability and supply. Each test has their own benefits and limitations, but when used together a grower can gain a better overall picture of their agronomic practices.

We work with accredited laboratories abroad, to provide services with the very latest instrumentation, techniques and quality control procedures, which are used by its qualified personnel for the provision of rapid, accurate and impartial services.

Fast and reliable turnaround time.

Accurate soil and leaf analysis starts with smart sampling, consider soil type, topography, crop variety, and plant growth stage. Sample uniform zones, avoid stressed plants, and collect at the right time to ensure reliable results that guide effective nutrient management and better yields.

Soil and leaf analysis is a management tool that allows to identify nutrient deficiency and improve fertilizer management.
